The data included in this report is accurate according to Euromonitor International´s market research database, at time of publication: July 2023

Contents

Introduction

Scope

- Men’s Grooming USD54 billion
  - Men's Shaving
    - Men’s Post-Shave USD1.0 billion
    - Men’s Pre-Shave USD2.4 billion
    - Men’s Razors and Blades USD10.6 billion
  - Men’s Toiletries
    - Men’s Bath and Shower USD3.1 billion
    - Men’s Deodorants US9.5 billion
    - Men’s Hair Care USD4.9 billion
    - Men’s Skin Care USD4.3 billion
  - Men’s Fragrances USD 18 billion

All values expressed in this report are in US dollar terms, using a fixed 2022 exchange rate. All forecast data are expressed in constant terms. All historic data are expressed in current terms, with inflationary effects are taken into account.

This report includes analysis from the beauty and personal care industries, focusing on the following categories:

The evolution of men's grooming, fuelled by growing self-care, societal change, and the rise of gender fluidity, significantly influences the market. Trust and brand loyalty play major roles in male consumer decisions, bolstered by increasing grooming content over social media. Budget reallocation due to grooming behaviour shifting and inflationary pressure will negatively affect the market value. Despite the challenges, untapped and oncoming Gen Z consumers have gained prominence.

Key findings

Men's grooming outperforms wider beauty and personal care industry

The sector witnessed modest fluctuations in per capita spending between 2017-2022, mainly due to the pandemic impacting purchases to categories like deodorants and fragrances. Regions like Western Europe, North America, and Australasia led in per capita spend due to premiumisation and improved grooming habits. Inflationary pressures led men to prioritise premium products in categories like fragrances while trading down on general care products.

More consumers are exploring beyond basic grooming products

The evolution of self-care among men, fuelled by societal change, interest in advanced care and styling, and the rise of gender fluidity, significantly influence the men's grooming market. This shift has led to more men exploring beyond traditional grooming categories, opening up to a broader array of beauty and personal care products.

Social media content serves as a significant influencer for men's grooming

Even though grooming behaviours vary among consumers from different countries and generations, trust and brand loyalty play a major role in male consumer choices, bolstered by increasing content about grooming tips and product information over social media.

Top trends provide unexplored market opportunities

The men's grooming landscape is being reshaped by the rise of genderless beauty brands and men's cosmetic surgeries. Gamification becomes essential to actively engage male consumers, while Gen Z's digital-first and exploratory approach directs market trends. Additionally, men's grooming is expanding into holistic wellness spaces.

State of the industry

Passport

Men’s grooming outperforms the broader beauty and personal care industry in 2022

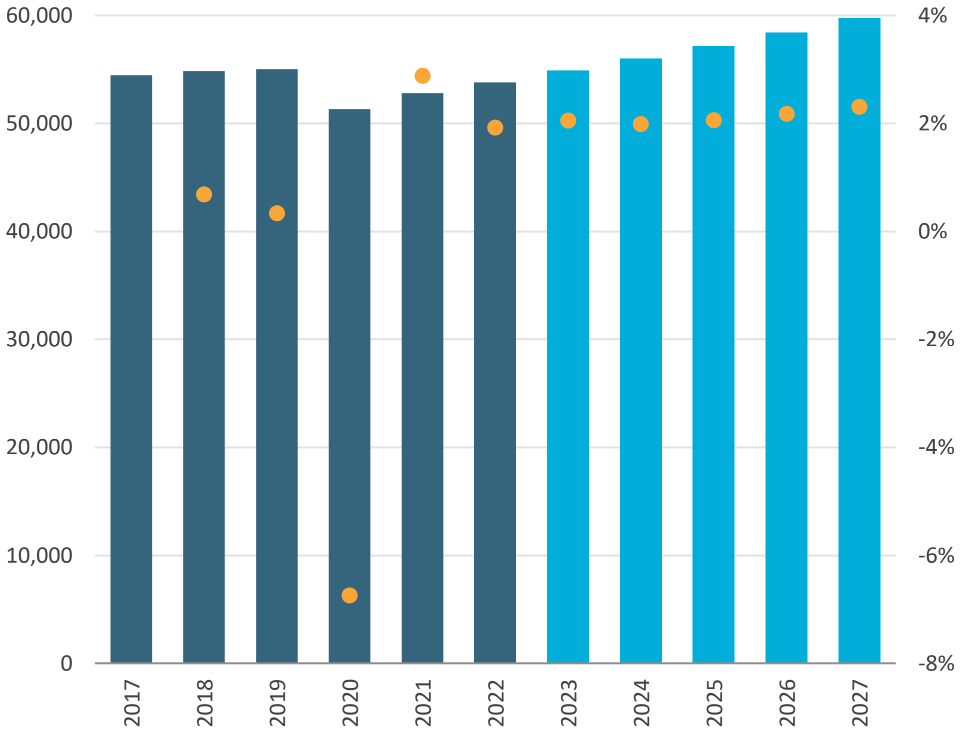
Global sales of men’s grooming grew by 2% in value at constant prices in 2022, outperforming the wider beauty and personal care industry (-0.5% in 2022). With most countries experiencing their first full year without lockdown restrictions in 2022, category growth was predominantly fuelled by sub-categories that benefited from the resurgence in out-of-home activities, like men's deodorants and fragrances.

In constant terms, topline sales for 2022 remained below the pre-pandemic high of 2019. This can be partly attributed to the growing popularity of facial hair, which led to a decline in usage occasions for men’s shaving products, while environmental concerns continued to hinder sales of disposable razors.

Another key factor has been the evolution of self-care among men, with factors like societal change, growing interest in ingredient-led beauty and the rising prominence of genderfluidity, contributing to more men looking beyond the traditional men’s grooming category for beauty and personal care products. Men’s grooming brands are now responding to this placing a greater focus on personalisation, male specific needs, and emerging segments. As such, the global market is predicted a 2% CAGR over 2022-2027.

Men’s Grooming: World % Y-o-Y Growth 2017-2027

Retail Value RSP USD million



Polarisation of per capita spend between developed and emerging markets

Within beauty and personal care, men's grooming ranked fifth highest for per capita spend, at USD7 in 2022, one-third of the No.1 category, skin care. Between 2017-2022, the category experienced modest fluctuations in per capita spend, predominantly during the pandemic years when deodorant and fragrance purchases reduced.

Developed regions – Western Europe, North America and Australasia – stand out for high per capita spend, owing to premiumisation and improving male grooming habits. Combined they accounted for 47% of total men's grooming sales in 2022. Latin America had the fourth highest capita spend, at USD16, accounting for 20% of global sales. Asia Pacific and the Middle East and Africa outperformed most other regions in CAGR terms between 2017-2022, despite recording the joint-lowest per capita spend at USD2. This can be attributed to younger male consumers in these regions willing to spend more on their appearance compared to older generations.

US drives global growth while China and India lag behind

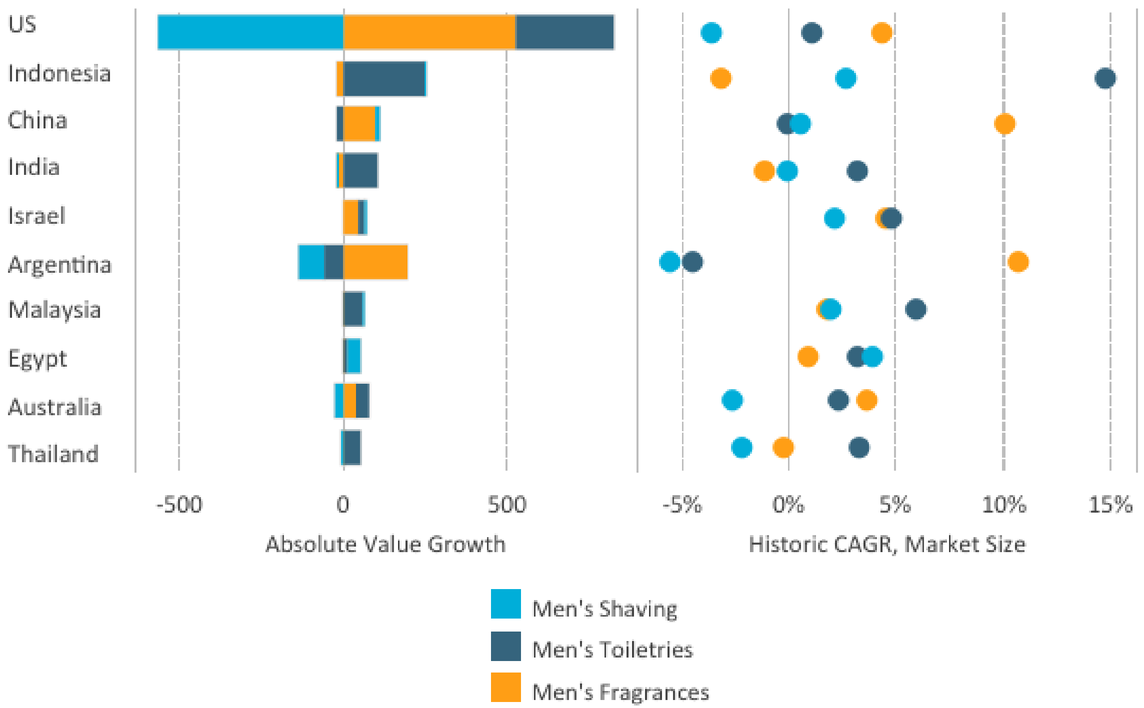
The US led men's grooming in absolute value growth terms between 2017-2022, attributable to the acceleration of premium segments such as fragrances and skin care. This was partly offset by men's shaving, which witnessed a strong decline as more men embraced facial hair, while environmental concerns continued to lower usage of disposable razors.

Indonesia was the standout performed in Asia Pacific as male education regarding beauty and personal care has expanded beyond essential items, leading to growing usage of more sophisticated products like skin serums.

China and India recorded modest absolute growth during the period, considering both their male populations are over 5x larger than the US. China was also hindered by another year of lockdown restrictions in 2023, impacting sales of fragrances and toiletries.

Men's Grooming in World: Breakdown by Category for Top 10 Countries with Biggest Absolute Value Growth 2017-2022

Retail Value RSP USD million



Inflation affecting beauty and personal care players from all regions

Inflation having profound impact on beauty and personal care

Around half of global beauty and personal care industry respondents stated that inflationary factors impacted their company in 2022, with respondents from Latin America noting the greatest impact.

Price increases are nuanced and not uniform across categories, markets and months

Euromonitor's Beauty and Personal Care Price Tracker found the percentage change in average unit prices in 2022 varied greatly by market and category, including men's grooming. In Poland, electric toothbrush units (42%) and 2-in-1 shampoo + conditioner products (25%) registered the largest price jumps, while men's fragrances (+10%) and men's razor and blades (+9%) were considerably lower. Price increases also varied between premium and mass brands.

Product evolution is also driving higher prices

Higher prices can also be a function value creation. "Skinification" is impacting colour cosmetics and hair care prices, since consumers increasingly expect more sophisticated formulations or concentrated skin care ingredients. Brands are also introducing innovative ways for consumers to experience products, such as product activation and personalisation, which contribute to higher prices.

Companies conscious of which categories consumers are willing to absorb higher prices

One method that companies and retailers are using to combat the impact of rising costs is by passing them directly onto the consumer. Categories with greater demand in 2022, such as men's deodorants and fragrances, witnessed the strongest change in average unit prices across the Top 10 countries as consumers were more willing to absorb these additional costs.

Players within weaker performing categories in 2022, like men's shaving, have been more conservative with increasing product pricing owing to awareness that any considerable hikes could further deter consumer interest in these spaces.

Consumers from the Asia-Pacific region experienced the strongest hikes, partly driven by higher costs related to the extended lockdown in China, but also by a stronger brand focus on premiumisation. For example, L'Oréal is specifically targeting high-spending consumers in this region, with Armani seeing a stronger price change in China in 2022 compared to the UK and US.

Male expenditure on BPC products rise in 2022 but inflation influences spending habits

Male consumer spending increased in 2022, largely driven by desire to treat oneself for living in lockdown for two years. However, inflationary pressure has impacted consumer confidence with Euromonitor's Voice the Consumer: Lifestyles Survey, finding that global male respondents in 2023 plan to decrease their spending. The rising cost of beauty and personal care products in 2022 has already influenced purchase habits, with many men trading down in some categories to afford premium acquisitions in others.

Personal care categories, like men's deodorants and bath & shower, witnessed a notable shift from premium to mass in 2022 owing to the perception that these products offer a similar outcome irrespective of their price. Trading down in these categories has enabled men to spend more on products like premium fragrances, as they are longer-lasting and have stronger scents, as well as being perceived as a status symbol, which helps men justify the higher price point.

Amid high inflation, men's grooming private label brands lost market share in 2022 as brand loyalty among this demographic remained strong, particularly driven by a reluctance to try new products during a time of financial uncertainty. The segment was also hindered by a strong increase in promotions, especially multibuys.

Category prospects

Men's fragrances and men's skin care offer future market potential

Among the sub-categories in men's grooming, fragrances, shaving, and deodorants are the top three categories in terms of retail value sales in 2022, accounting for 33%, 26%, and 18% of the total sales, respectively. The only category that experienced a decline in constant prices between 2020 and 2022 was men's shaving due to the decrease in product usage caused by fewer outdoor activities during the pandemic and the evolving beard grooming trends.

Products used for basic grooming routines, such as shaving, bath and shower, and deodorants, which already enjoy high usage among male consumers, are expected to show only marginal growth till 2027. However, as more male consumers pay attention to their appearance, men's grooming routines become increasingly sophisticated. Products for styling and advanced care, such as fragrances and skin care, are projected to experience robust growth, with a CAGR of 3% and 4% between 2022 and 2027, respectively.

In terms of men's fragrances, Brazil, China, and Saudi Arabia are expected to have the most significant growth potential. As for men's skin care, China, Indonesia, and the USA are anticipated to become the key drivers for market growth.

Manscaping projected to ease future decline of men's shaving

Between 2017 and 2022, men's shaving was the underperforming category within men's grooming, declining by 3% in retail value at constant price term. The bulk of the decline came during the pandemic years when fewer social occasions reduced shaving habits, accompanied by more men embracing facial hair. Men's razors and blades, which accounted for 75% of total sales in 2022, witnessed a stronger decline during this period than pre-shave and post-shave products, which accounted for 17% and 8% respectively. This can be attributed to the environmental concerns surrounding disposable razors that has led many consumer to switch to electronic products, which are not tracked in the topline.

Forecast CAGR is projected to be flat for the category globally between 2022 and 2027. Popularity of beards and moustaches in Western markets is expected to fuel further declines but this is expected to be modestly offset by the rising prevalence of manscaping. The niche segment, which focuses on body hair grooming, is growing in popularity among Gen Zs and Millennials amid open discussions around personal hygiene and self-care. The most significant growth potential comes from countries growing from a low base like Pakistan and Egypt.

Hygiene categories benefit from activities outside the home post COVID-19

Hygiene-related sub-categories, men's bath & shower and men's deodorants, experienced solid upturns globally in 2022, thanks to most countries experiencing their first full year without lockdown restrictions. As such, out-of-home activities became more prevalent leading to more sweat occasions that boosted washing frequency and deodorant usage.

The most significant growth potential between 2022-2027 is expected in the Asia Pacific region, predominantly driven by China. Unlike other countries, China experienced another year of lockdown restrictions in 2022, which has meant the country has not yet rebounded to pre-pandemic levels like other markets.

Global CAGR growth (+2%) in the forecast period is expected to be driven by population growth and male consumers become more conscious of their grooming habits. One emerging space that is expected to benefit from this trend is men's intimate washes within bath and shower, which has witnessed growing focus and product innovation in recent years. Both sub-categories are also expected to benefit from their ability to provide a natural and appealing fragrance, as smell has become more appreciated post-pandemic after some consumers lost smell from COVID-19.

Hair care expected to benefit from growing popularity of facial hair

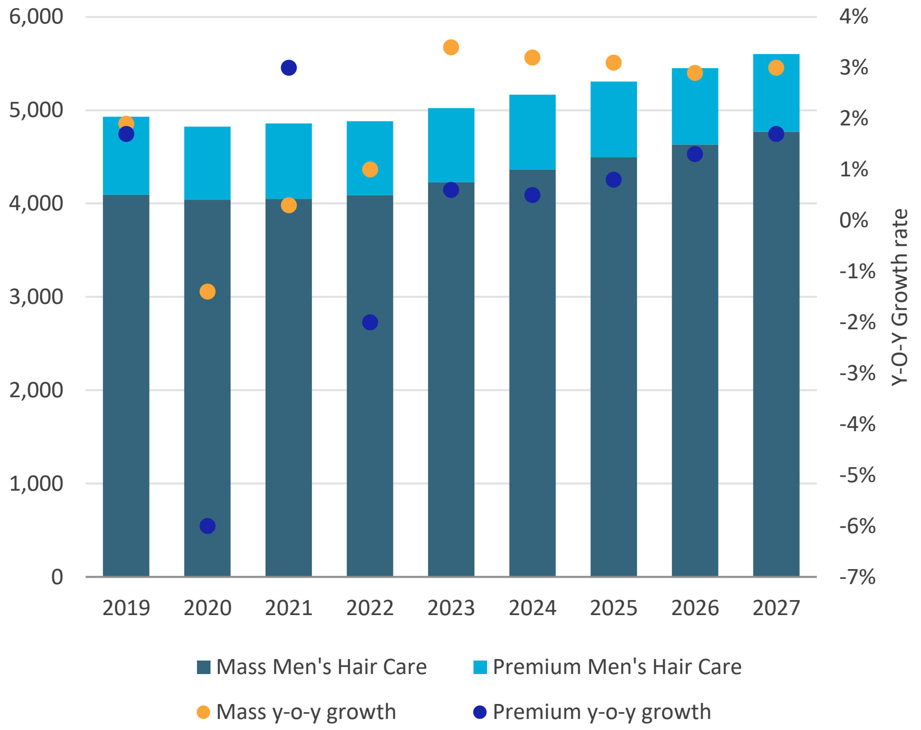
Constant value sales of the global men's hair care market in 2022 remained below pre-pandemic levels, partly driven by men switching to unisex brands as innovation in the men's space has lagged behind the broader category. Performance has also been impacted by improving male knowledge of hair care, particularly through growing awareness that frequent hair washing can have negative impacts, both environmentally and on hair health, which has led to reduced usage of standard shampoos and 2-in-1 shampoo/conditioner products.

Projected growth for the category is expected to be driven by new and emerging segments. One area is scalp treatments, a trend that rose in prominence during 2022 as ingredient-led beauty and hair skinification grew in popularity. Demand in this space is expected to be fuelled by rising concerns surrounding hair loss, partly driven by COVID-19 and stress related to political and economic uncertainty, but also through Gen Zs and Millennials looking to address hair loss concerns from a younger age.

The future loss of sales for men's shaving is anticipated to be partially offset by stronger sales of hair care products for beards and facial hair, driven by more product development in this segment.

Men's Hair Care: Mass vs Premium, Global 2019-2027

Retail Value RSP USD million



Mature markets demanding advanced men's skin care products

The men's skin care market is forecasted to have a 4% CAGR between 2022 and 2027, with the highest potential growth among all men's grooming categories. The development stages of men's skin care in different countries vary greatly.

In markets where men's skin care awareness is relatively mature, such as China, South Korea, and the USA, the demand for men's skin care is evolving towards a more advanced level. The product offerings are developing diversification towards a more specialised range to cater the niche demands, from basic functionalities like oil control or moisturising to anti-ageing, and sun protection. Moreover, as male consumers become increasingly knowledgeable about their skin concerns and suitable ingredients, they tend to move their budget to a wider range of brands. This means dermocosmetics or gender-neutral brands will erode the market size of "only-for-men" skin care products.

On the contrary, in the countries where men's skin care demands are just started to be awakened, such as Indonesia and India, there is still an untapped demographic dividend to be explored for basic offerings like facial cleansers and moisturisers with considerable room for growth.

Men’s fragrances see potential in the premium sector, but hindered by unisex trend

The fragrance has emerged as a key component of men's grooming routine, with a growing demand for premium, high-quality, unique scents that cater to their preferences. Asia Pacific holds immense potential for the growth of the premium men's fragrances market. On June 2023, Kering's purchase of Creed, famed for its men's fragrance Aventus, demonstrates the company’s intent to tap into burgeoning markets like China and travel retail.

The market landscape is also shaped by the influence of niche brands such as Le Labo and Byredo, alongside fashion house brands like Calvin Klein and Maison Margiela. These brands are catering to a societal shift towards gender-neutral products that reject traditional gender codes and emphasize self-care, acceptance, and gender fluidity.

Premium fragrance launches are increasingly geared towards empowering all gender consumers and enhancing accessibility, as mirrored in the choice of brand ambassadors and the balanced femininity and masculinity of the scents.

This preference for gender fluidity lends a significant advantage to unisex premium fragrances, which are projected to experience a CAGR of 6.5% until 2027.

More male consumers embrace using colour cosmetics for a more sophisticated grooming

With the evolving perception of masculinity, there is a growing acceptance of men wearing makeup to enhance their appearance and boost self-confidence. This cultural shift has led to the emergence of men's colour cosmetics products tailored explicitly to male consumers.

Particularly in Asia, more male consumers are embracing the regular use of makeup to achieve a polished but natural look. In China, over 30% of male consumers between the ages of 20-34 use BB or CC cream more than once a week, with 14% using it daily. In South Korea, the percentage of male consumers in the same age group using concealer more than once a week grew from 10% to 17% between 2018 and 2022.

Men's colour cosmetics are often positioned as the final step in the grooming routine, prompting many men's grooming brands to expand their product offerings to include colour cosmetics and involve the existing consumer base. Amore Pacific's men's grooming brand, B.Ready, launched a foundation product line in December 2022, offering five shades and a portable cushion format to cater to the increasingly sophisticated demands of young male consumers. Additionally, US-based direct-to-consumer brand Stryx introduced spot-concealing products to their product range.

Grooming and purchase behaviours vary among consumers in different countries and generations

Four types of men's grooming consumers:

Unsettled budgeteer: Price-conscious and likely to switch brands if similar quality but at a better price. More likely to be attracted to private labels, promotions, and value packs.

Only do the basic routine and are less acceptable to new steps. Some Gen Zs who are still exploring and have not yet formed a usage habit.

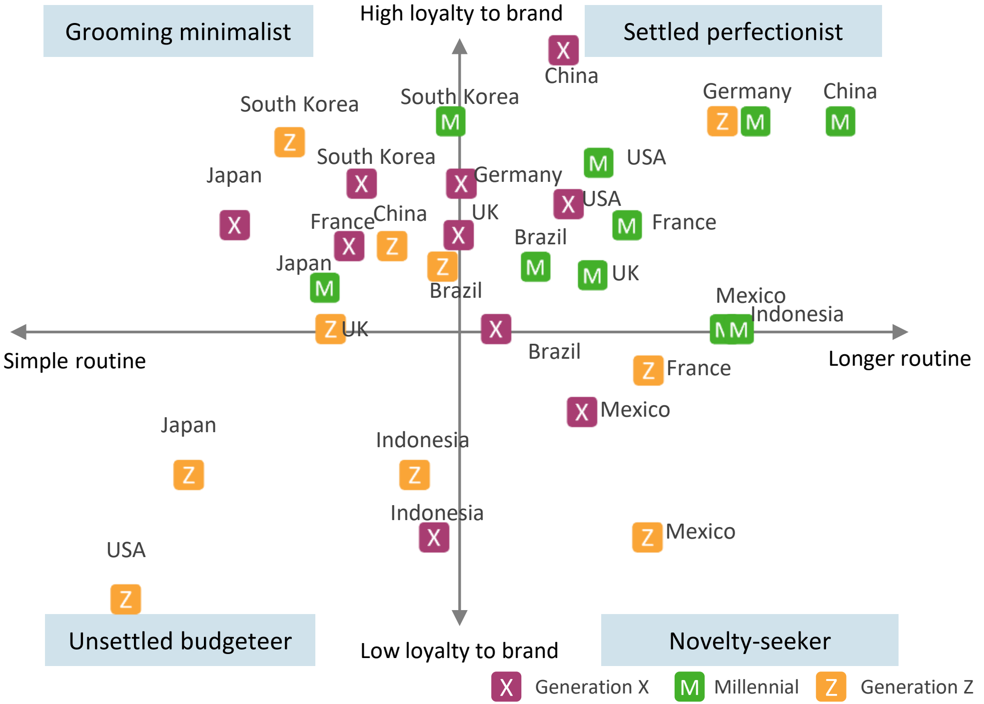
Grooming minimalist: Favour simplicity and functionality and usually stick to a formed grooming routine. Once find the products that meet their demand efficiently, they are likely to stick to the same brand with being less price-sensitive.

Settled perfectionist: Meticulous and have high standards for products, a defined grooming routine, and high brand loyalty.

Tend to prefer natural, high-quality ingredients.

Novelty-seeker: Knowledgeable and like experimenting new brands and grooming tips on social media.

High acceptable to products that offer unique features that help them stand out and be fashionable.



Source: Euromonitor International Voice of the Consumer: Beauty Survey,2022
Simple/longer routine: Survey result of the frequency of the usage of facial cleanser, facial moisturiser, hair styling products, face masks, BB or CC cream
High/low loyalty to brand: Survey result of loyalty to skin care and hair care brand

Male consumers rely on trusted recommendations and show high brand loyalty

Male consumers tend to have higher loyalty to grooming brands than female. Based on Euromonitor Voice of Consumer: Beauty Survey 2022, 47% and 54% of male consumers always or sometimes buy the same brand/product for skin care and hair care, respectively. Male consumers are more likely to stick to a brand once they find products that suit their needs.

Instead of spending long time comparing and browsing before purchasing, male tend to be more purposeful and assertive in their brand choices than female.

For purchase influencers, male consumers are easily swayed by recommendations from friends, dermatologists, or stylists, which tend to be regarded as trustworthy sources. Brands looking to effectively market grooming products to men, especially those in an advanced care range, should employ an "education + shopping guide" approach. By creating content that educates men on the benefits and usage of the products while also providing a concise shopping guide, brands can cater to the male consumer's preference for purposeful shopping. This strategy equips them with the necessary information to make informed, quick decisions and can lead to increased brand loyalty among this demographic.

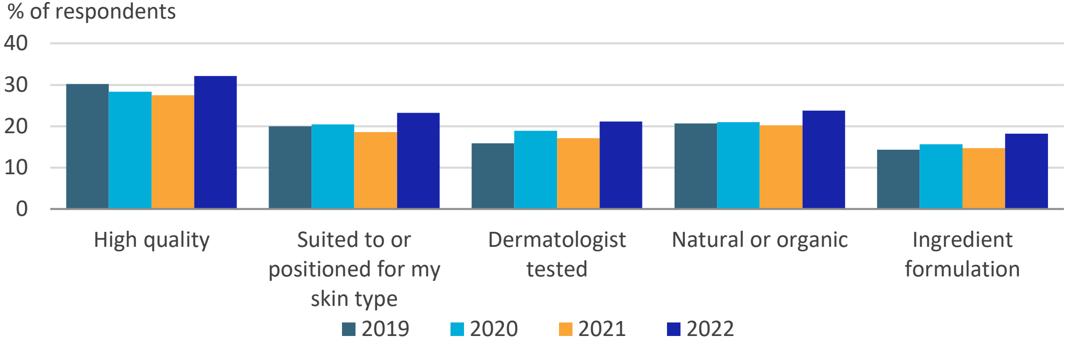
Increased skin care knowledge leads to specific demand for specialised products

Men's skin care was previously centred around all-in-one products that offered simplicity and convenience. This approach stemmed from a need for more awareness and limited options specifically designed for male consumers. Male are now more comfortable discussing skin care and have a deeper understanding of their skin types and specific needs.

By comparing the survey results about desired skin care features between 2019 to 2022, currently, male are seeking skin care products that are high quality, dermatologist tested, and with a focus on ingredient formulation.

According to the Euromonitor Voice of Consumer Beauty Survey 2022, within the top five skin concerns, blackheads, acne, and sensitive skin are the common skin concerns for male across all generations. Male consumers with a high understanding of skin care knowledge are more inclined to make rational choices by selecting brands not exclusively marketed as "for men" and opting for dermocosmetics brands to address specific skin concerns effectively.

Desired Skin Care Features Among Male Consumers 2019-2022



Top five Skin Concerns : Male by Generation 2022

	#1	#2	#3	#4	#5
Gen Z	Blackheads	Blemish/acne-prone	Acne pits	Dark circles	Sensitive
Millennials	Blackheads	Sensitive	Blemish/acne-prone	Acne pits	Dark circles
Gen X	Blackheads	Wrinkles	Sensitive	Dark spots	Blemish/acne-prone
Baby Boomers	Wrinkles	Blackheads	Sensitive	Dark spots	Fine lines

Usage of hair loss treatments continues to grow beyond the pandemic

Men's hair care also has a longstanding association with 2-in-1 shampoo/conditioner products. Predominantly driven by convenience, but also by poor consumer knowledge and a lack of product innovation within the men's space.

Platforms such as TikTok, as well as brand activity (e.g. VO5's "If You've Got Hair, Care" campaign), has started to have a positive impact on men's education of hair care. Euromonitor International's Voice of the Consumer: Beauty Survey, found that daily and weekly usage of standard shampoos and 2-in-1 shampoo/conditioners both fell by 5% between 2018 and 2022, partly due to growing awareness that frequent hair washing can impact overall hair health and quality. On the other hand, usage of hair conditioner and treatments grew as more men looked to adopt a more personalised, extensive, hair care routine.

Interest in hair loss treatments continued to grow, partly accelerated by COVID-19 and stress during these times of political and economic trouble. Baby boomers and Generation X are likely to opt for clinically-backed products targeting hormonal hair loss. While the concerns of younger generations are oriented around hair loss prevention, brands could serve to build communities to better utilise social media.

Social media contents influence and educate male consumers about colour cosmetics use

As male consumers increasingly pay attention to appearance and individual expression, more consumers have begun integrating colour cosmetics products into their daily grooming routines.

Among all age groups, males aged 20 to 34 show the highest frequency of colour cosmetics usage, mainly due to their high exposure to various social occasions. Male consumers primarily seek colour cosmetics that enhance their skin's performance, such as blemish and pore coverage, matte finishes, and eyebrow grooming. According to Euromonitor Voice of Consumer: Beauty Survey in 2022, nearly 25% of respondents in the 20 to 34 age group reported using BB or CC cream more than once a week. And the other widely-used products among this age group are pore minimiser, oil blotter, and finishing facial powder.

The popularity of social media content has not only influenced male consumers to place greater importance on their appearance. Still, it has also provided them with new places to access makeup information and knowledge. Additionally, the influence of celebrities has played a significant role in promoting a more inclusive view of masculinity. The changing stereotype of men wearing makeup has contributed to a broader acceptance and greater demand for male colour cosmetics products.

Competitive landscape

Market fragmentation continues to fall across key markets

The top five global men's grooming players have seen their combined share fall a percentile to 42% between 2017 and 2022 as smaller brands have benefited from taking a more specialised approach to men's grooming focusing on specific needs.

The perception of men's grooming has evolved. 2022 saw the major companies expand brands into emerging spaces like scalp health, while a more holistic approach has also been witnessed as mental health becomes a key topic.

Despite price concerns increasing, global market share of private label brands within men's grooming fell in 2022. This can be attributed to a stronger reluctance among men to trade-down compared to women owing to the age-old perception that a higher price equals better quality. According to Euromonitor's Voice of the Consumer: Beauty Survey, 42% of men in 2022 preferred to purchase branded skin care products compared to 35% of women.

Top five players witness shares recede as fragrance competitors bounce back

Procter & Gamble and Unilever are the top two players in men's grooming, accounting for 28% of value share in 2022. The former's consolidated position comes from No.1 global brand, Gillette, which accounts for three times the market share of the next entry Axe/Lynx (Unilever). Although the ranking of both companies has remained unchanged between 2017 and 2022, their lower than industry average growth rates during this period, due to the better performance of competitors, has led to their share of the market eroding.

L'Oréal, Coty and Beiersdorf maintained market share in 2022, consolidating their position in the top five.

Natura & Co rose one place in the rankings in 2022 to sixth, thanks to resilient sales from its men's fragrance business in Latin America.

The global rebounding of fragrance sales in 2022 were also key factors behind share growth of Puig SL and LVMH Moët Hennessy Louis Vuitton SA.

Unilever continues to heavily support Dove in western markets via product innovation

Dove Men+Care Advanced Care Sensitive Calm

Formulated with aloe vera extract, the mild cleanser calms dry, irritated skin.

Dove Men+Care Advanced Care Dry Repair

Infused with smooth shea butter to help hydrate and restore dry skin.

Dove Men+Care Advanced Care Acne Clear

Brand's first product to be formulated with 1% salicylic acid, alongside active nourishers to help prevent

Image source: Dove.com

Characteristic

- Since 2020, Unilever has placed greater focus on men's grooming by expanding its Dove Men+ Care range in the UK and US. The most recent US launch, the Advanced Care Face + Body Cleansing series in Q1 2023, helps naturally repair the barrier of different men skin types.

Context

- Launch follows Unilever research that found few available cleansers that cater to men's skin types. Compared to women, men produce more oil and are more prone to acne owing to larger pores, while regular shaving and rough skin textures result in drier skin among men.

Consequence

- The launch resonate with the emerging ingredient-led beauty trend, where the specific ingredients has helped to personalise the routines. This will attract men who are busy but eager to try new ingredients. It also reinforces Unilever's commitment to position Dove as a brand that caters to men's needs.

Shiseido launched skin care brand SIDEKICK targeting Gen Z male consumers in Asia

Image source: Shiseido SIDEKICK, fashionsnap.com

Characteristic

- Shiseido launched the new men's grooming brand Sidekick, aiming at Gen Z consumers. The brand focuses on self-expression and the personal style of Gen Z. Through brand communication devised by students at Waseda University in Tokyo, the brand held events where consumers could experience the products with game-themed content, such as UFO catcher and darts.

Context

- The global male grooming market is growing, with Gen Z defining the industry's future. Gen Z consumers are more likely to be interested in self-care and personal grooming than previous generations. Creating social buzz through user-generated content becomes an efficient marketing strategy for brands targeting younger consumers.

Consequence

- As a new trial from Shiseido, the launch of Sidekick has been met with positive reviews from Gen Z consumers. Beyond the skincare function, Shiseido also builds the character of SIDEKICK as a "buddy" and a pioneer who support and help youngster express their individuality.

UK start-up War Paint continues to tackle colour cosmetic taboo among men

Image source: warpaintformen.com, cosmeticbusiness.com

Characteristic

- War Paint, a UK-based start-up established in 2018, aimed to empower men to feel confident in their appearance through a range of colour cosmetic products that are specifically tailored for men's skin.

Context

- The male cosmetic market in the UK is largely untapped, and UK male consumers exhibit limited knowledge of make-up. In response, War Paint aimed to bridge the gap through a straightforward range of colour cosmetic products that have simple techniques and easy-to-follow steps.

Consequence

- War Paint has successfully expanded its retail footprint since release, including its November 2022 launch in leading UK retailer, Superdrug. The company also opened its first bricks-and-mortar store in central London in July 2021, touted as the "world's first men's make-up store".

Chinese indie brand DearBOYfriend resonate with consumers as a lifestyle brand

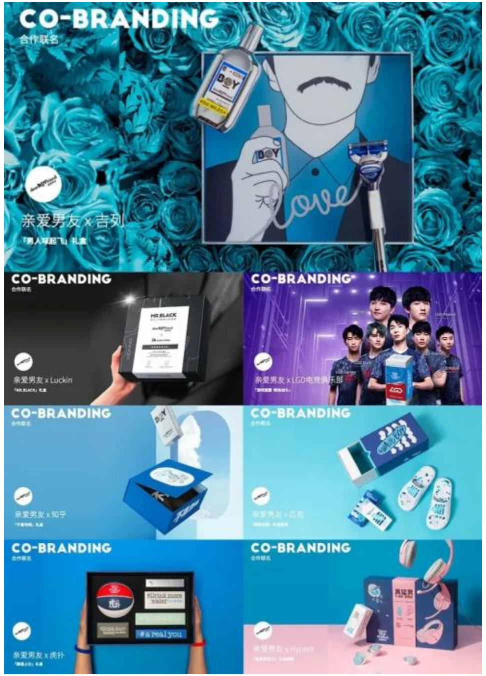

Image source: Image Source: DearBOYfriend

Characteristic

- The Chinese men's grooming brand, DearBOYfriend, aims to redefine the concept of men's grooming by offering products and experiences that resonate with the modern man's lifestyle.

Context

- There is still a lack of channels for consumers to get grooming knowledge in China. DearBoyfriend aims to address this by creating a product line centred around the concept of a lifestyle with various aspects, entertainment, and work scenarios., making it easily accessible for male consumers.

Consequence

- DearBoyfriend has successfully launched its products through diverse channels in China since its debut in 2021, with a lineup of over 20 SKUs. Notably, DearBoyfriend has partnered with NFT digital collection BAYC and introduced exclusive collaboration sets, strategically targeting the interest of young men.

Retail environment

Channel shift to E-Commerce and beauty specialist for a variety of options and convenience

Between 2019 and 2022, men have demonstrated a strong inclination towards E-Commerce and beauty specialists as the preferred shopping channels for grooming products. Traditional mass merchandisers such as supermarkets and hypermarkets have witnessed a decline in male consumers. The percentage of male respondents who shop for skin care and hair care in hypermarkets declined by 2% and 3% between 2019 and 2022, respectively, partly due to the pandemic and, more importantly, the surge of other channels. Male consumers now purchase more in E-Commerce, which provide affordable and convenient solutions like Amazon and JD.com.

Additionally, there has been a noteworthy increase in the percentage of men shopping at beauty specialists, both online and offline. The percentage of male respondents who purchase from beauty specialist online retailers increased by 4% and 3% between 2019 and 2022 for skin care and hair care, respectively. The percentages grew to a level close to the female counterpart, who prefers exploration and comparison before purchase. The increase stemmed from a growing demand for exploring new brands and high-quality products that address advanced efficacies from the curated selections of beauty specialists.

TikTok empowers marketing and sales of men’s products to a vast young male user base

Trends influence and education

TikTok catalyses the emergence of trends and challenges within men‘s grooming, often featuring the utilization of specific products. Dermatologists, barbers, and hairstylists share grooming tips and tutorials, enlightening male consumers to care more about appearance. Hashtags, such as #mensgrooming and #mensskincare, provide an easy, personalised, and community-driven way for men to browse rich grooming trends.

Product discovery and influencer endorsement

Male users are actively or passively exposed to grooming products recommendation through Tiktok from influencers and peer users.

E-Commerce integration and impulse purchases

The impulsive nature of content consumption and seamless shopping integration on TikTok lead to impulse purchases. Men’s grooming is a category that helps Tiktok (Douyin in China) to grow its E-Commerce market share by commercialising the massive traffic from male users.

UK health and beauty specialists bolster male portfolios through indie brands

The surge in demand for men's grooming has prompted beauty retailers worldwide, notably in western markets like Portugal and the US, to reassess their shelf space allocation and broaden their product portfolios. This has been particularly evident in the UK, where Boots and Superdrug, leading health & personal specialists, have overhauled their product offerings.

Previously, men's grooming products within UK retailers were largely limited to established legacy players. However, both retailers have started to add fast-growing indie brands to their portfolios in response to the evolving ways that men are now discovering brands. Indie brands are now able to gain mass appeal quickly through retail e-commerce channels and social media, compared to previously when a lack of retail presence in bricks-and-mortar stores hindered their opportunities. In 2023, Boots underwent a category refresh, including the launch of it first premium male products, through brands such as skin care specialist Anthony and hair care range Hanz de Fuko, as well venturing into men's make-up through indie player, Shakeup Cosmetics. The latter is also now available in Superdrug alongside other upcoming brands, like War Paint and Aaron Wallace, a men's grooming brand for curly and afro hair textures.

This demonstrates that UK retailers do not expect male spending on beauty and personal care to ease anytime soon. They could also benefit from the stagnancy of grocery players who still lag behind competitors in refreshing their men's ranges.

Men's grooming to be challenged by genderless beauty brands

Globally, male consumer attitude towards genderless beauty continues to improve. Euromonitor International's Voice of the Consumer: Beauty Survey, found that five of top 12 largest growing responses to the male definition of beauty between 2021 and 2022 were linked to inclusivity and embracing oneself.

A contributing factor to this rise has been celebrities and pop culture driving the adopting of genderfluid habits among Gen Zs and Millennials. The former has been particularly prevalent, with some launching their own genderless brands (e.g. Harry Styles' Pleasing and Brad Pitt's Le Domaine), while others fronted campaigns (e.g. Fenty Beauty x A$AP Rocky and Lil Nas X) or entered collaborations (e.g. Mac x Harris Reed or Rimmel London x Tom Daley). The influence of this activity has been reflected online through growing movements like "Get Ready With Me", which show a societal change in how men see and interact with beauty products.

The rise in popularity, and availability, of genderless beauty is expected to erode future sales of men's grooming, particularly skin care, where self-care and expression will take priority. Inclusivity is becoming the norm for beauty, and companies will need to make it an integral part of their branding and marketing going forward to appeal to younger demographics.

Growing male cosmetic surgery creates new demand on advanced post-care products

Cosmetic surgery is becoming more popular among men; according to the American Society of Plastic Surgeons, the cosmetic procedures performed on men grew 20% between 2018 and 2022, to 1.1 million in 2022. The increasing availability of affordable surgeries and the growing acceptance of cosmetic surgery among men contribute to global growth. Also, cosmetic surgery is considered as an once-for-all, convenient solution that sought after by men. Popular surgeries among men are Botox, fillers, hair transplantation, hair removal, and treatment for acne blemishes and scars.

This trend presents new opportunities for product development and channel shifting for the men's grooming market. As more men have cosmetic surgery, there is a rising demand for specialised dermo brands that offer post-surgery advanced care and maintenance. The hospital is expected to serve as a high-conversion channel, with doctors already playing as powerful influencers among men.

Source: LG Electronics

The self-care products incorporate technologies, such as beauty devices, that aid in collagen production or prevent hair loss. In South Korea, LG Electronics launched the light therapy device "Medi Hair" that prevents hair loss, targeting male consumers' concerns even at young ages.

Spotlight: How is gamification developing within men's grooming?

Virtual Try-On

Lockdown restrictions accelerated the adoption of digital try-on across beauty brands' websites and mobile apps. Using augmented or virtual reality, consumers are able to upload images to test products virtually and make informed purchasing decisions online. In January 2023, Bulldog Skincare added AI Skin Advisor to its UK website, developed with Revieve, a self-diagnostic solutions creator. The virtual tool analyses the user's skin and provide a personalised routine, as well as advice, in under one minute.

Gaming

Video games have become an integral pastime for many men, with Gen Zs and Millennials particularly willing to devout countless hours into virtual worlds. Men's grooming has always had a vested interested in space through web-based mini games and online quizzes but activity has shifted towards collaborations and e-sports. In January 2022, L'Oréal Men Expert teamed with French-based e-sports team Fnatics, as a shirt sponsor and co-creator of a #PrepToPlay. A docu-series that showed their members' skin and body care routines, and its importance to their success.

Packaging

Gamification within packaging is rapidly changing. Historically, it focused on limited-edition SKUs that would act as a collectable for fans of different video games and TV shows. However, technology like QR codes, have allowed men's grooming players to create a more immersive experience for their consumers, offering prices and collectables, which encourage repeat purchases. Unilever uses this strategy for Lynx Africa, with the latest development in March 2023 seeing the launch of "Greatest of All Time" packaging, which uses QR codes for prizes.

According to Euromonitor International's Voice of the Consumer: Lifestyles Survey, 54% of global male respondents valued online virtual experiences in 2023, up from 52% in 2020.

Blurring of beauty and wellness: Opportunity for the establishment of "mega-brands"?

Globally, male consumers want to take better care of their health, a subject that has risen in prevalence since COVID-19. Euromonitor International's Voice of the Consumer: Health and Nutrition Survey, fielded January to February 2023 (n=21,221), found that 53% of global male respondents in 2023 were either moderately or extremely concerned by their health (up from 48% in 2020).

Interest in this space has also been partly driven by awareness of segments like sexual, mental and skin health improving. The trend is seeing more activity in larger markets, such as the UK, where men's grooming brands blur between the beauty and wellness spaces, creating portfolios that cater to men's evolving needs. For example, telehealth company For Hims, offers personalised treatment plans, which include Rx products, for hair loss, erectile dysfunction and skin care.

With brand loyalty among men strong, alongside the blurring of these segments, it presents opportunities for established brands to expand their portfolios and create "mega brands" that consumers can trust and have confidence in to meet various needs. This is a strategy that Bayer has successfully implemented for several brands within consumer health. For example, the Bepanthen Derma range, launched in 2021, has been accepted by consumers as a more cosmetically positioned range compared to the wider, clinical backing of the original brand. The line extension has been well received in countries such as Brazil, Germany and Saudi Arabia thanks to the strong recognition and trust that consumers had in the brand previously.

Gen Z to shape the future market with their digital-first feature and eagerness to explore

By 2032, Gen Z is projected to constitute 21% of the global population, with Gen Z males playing a significant role in shaping the future of the men's grooming industry. Their distinct behaviours, preferences, and informed approach toward grooming encourage the demand for diverse, specialized products rather than generic solutions.

Gen Z males, as digital natives, demonstrate a strong inclination towards digital engagement. Their purchase decisions are significantly influenced by recommendations from influencers over social media and the digital presence of brands, underscoring the importance of digital engagement and gamification for the industry. Furthermore, Gen Z males are evolving past traditional gender norms and are open to gender-neutral products. This indicates a redefinition of modern masculinity amongst Gen Z men.

Source: Euromonitor International Voice of the Consumer: Digital Survey 2023, Lifestyle Survey 2023, Beauty Survey, 2022

Conclusion

Key findings

Men's grooming outperforms wider beauty and personal care industry

The sector witnessed modest fluctuations in per capita spending between 2017-2022, mainly due to the pandemic impacting purchases to categories like deodorants and fragrances. Regions like Western Europe, North America, and Australasia led in per capita spend due to premiumisation and improved grooming habits. Inflationary pressures led men to prioritise premium products in categories like fragrances while trading down on general care products.

More consumers are exploring beyond basic grooming products

The evolution of self-care among men, fuelled by societal change, interest in advanced care and styling, and the rise of gender fluidity, significantly influence the men's grooming market. This shift has led to more men exploring beyond traditional grooming categories, opening up to a broader array of beauty and personal care products.

Social media content serves as a significant influencer for men's grooming

Even though grooming behaviours vary among consumers from different countries and generations, trust and brand loyalty play a major role in male consumer choices, bolstered by increasing content about grooming tips and product information over social media.

Top trends provide unexplored market opportunities

The men's grooming landscape is being reshaped by the rise of genderless beauty brands and men's cosmetic surgeries. Gamification becomes essential to actively engage male consumers, while Gen Z's digital-first and exploratory approach directs market trends. Additionally, men's grooming is expanding into holistic wellness spaces.

The evolution of men’s grooming

STAGE 1

- The ideal image of masculinity was quite singular, emphasising the gender code 'manly' traits.
- Male consumers weren't inclined to invest much time in grooming routines.
- The product offerings catered mainly to basic shaving and grooming needs, with market products primarily encompassing shaving-related items and all-in-one products.

STAGE 2

- Brands began to identify and cater to men's needs beyond basic cleansing and shaving.
- Products addressing specific skin issues like oil control and acne treatment were well received by young male consumers.
- Expanded categories like fragrances and deodorants started gaining consumes’ attention.

STAGE 3

- The definition of the ideal masculine image became diversified and inclusive.
- Influenced by social media and celebrities, an increasing number of male consumers are willing to invest time in learning about grooming and selecting suitable products for their individual needs.
- As the demand becomes more segmented, product offerings have expanded to include high-end skin care items like serums, moving forward to base makeup.

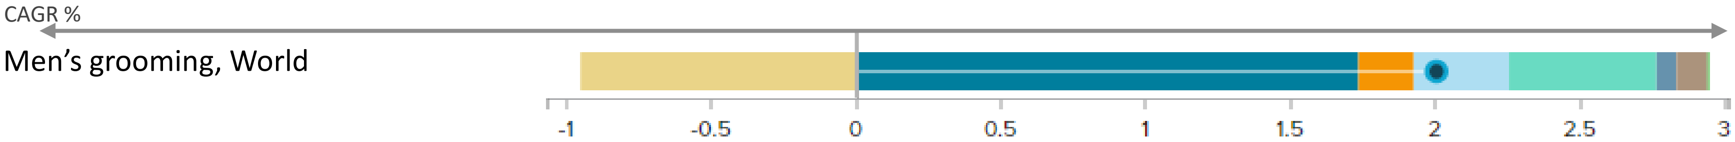
Opportunities and challenges co-exist in the future men's grooming market

Retail Value Sales, Constant Prices USD Million, 2022-2027



Negative factors

- Amid inflationary pressures, there's a noticeable trend of price-sensitive male consumers opting for fewer and cheaper products.
- Evolving grooming behaviours, such as maintaining beards, transitioning from disposable razors to electronic ones, and integrating post-shave routines with skincare, could negatively impact the sales of men's shaving products.
- Men with developed grooming behaviours are reallocating their budgets towards skin care, fragrances, and hair care products with fewer traditional gender codes. The growing preference for 'set and forget' solutions to skin concerns will lead to a move in the expenditure on cosmetic surgery from products.

Positive factors

- As products become more advanced in terms of efficacies and ingredients, the introduction of a diverse range of premium options will support market value growth.
- With fragrances becoming a routine part of men's grooming in major markets like China, premium men's fragrances stand to gain prominence.
- There remains untapped consumer segments in developing market and oncoming Gen Z consumers. Powerful social platforms like TikTok, with a significant male user base, play an important role in educating about grooming products, particularly the untapped millennials and Gen Z consumers. This will shape the grooming and purchase behaviours of this future spending cohort.
